JPMorgan Chase Challenge
Best Hack for Disaster Relief & Recovery

Major cities across the US and the world have been devastated by hurricanes and natural disasters, including two of JPMorgan Chase's thirteen global technology hubs in Houston (Hurricane Harvey) and Tampa (Hurricane Irma). We know the road to recovery is long and people are facing significant challenges as they work to recover from these historic events. Our help is clearly needed now and will be needed in the future when another disaster strikes.

Challenge: *Think about how technology can be used to aid cities impacted by natural disasters with relief and recovery. You can build off of one of the existing ideas already in the disaster relief technology landscape or come up with new ideas that address gaps in this space. Some areas that you may be interested in include communications, access to resources, infrastructure, and public safety.*

Judging Criteria

Best Hack for Disaster Relief & Recovery

- **Social Impact –** How well does the solution address the challenge or problem?
- **Innovation and Creativity –** How creative is the solution? Does it bring new ideas and approaches to solving the problem?
- **Completeness of Solution –** Is the solution finished? Does it work? Is there a roadmap for future enhancements?
- **Sustainability –** Is the solution sustainable within the context of the community it's aiming to impact?
- **Design –** Is the solution well thought out and designed?
